

## Tell us what your idea is.

---

*My idea is a program that works with a bluetooth earpiece that also has a camera. It will take pictures of people you meet and records their name, then automatically adds them to your contact list. Then next time you meet the same person it tells you their name and how you know them. It could work as a hearing aid to record the person's correct name, but it is not solely for the hearing impaired. I came up with the idea due to my inability to remember names and faces of the people I meet. It could also be used to help the blind, being the eyes for the person and using the ear piece to tell them who is standing in front of them. The applications are endless.*

## Tell us how you plan on bringing it to life.

---

*My project has barely been started, it is more of an idea at the moment. I have started writing some code but I have no coding experience and was using my idea as a learning experience, until I saw this contest. I do not know if it can be completed in time, but it is a winning idea.*

- 1. I have some code in my trial repository in GitHub, but I have never written a program before nor have I ever made an app.*
- 2. I would need help in every aspect to make the deadline for this contest.*
- 3. It would also require someone to make a bluetooth earpiece with a small camera*

## Tell us about you.

---

*I have been in sales and management for the past 20 years, selling building materials. I never considered writing code until recently. About two months ago I was hacked and somehow while trying to track down the hackers I ended up on GitHub and it caught my interest. I do not know if I qualify for this contest or not but it is a great idea and would like help to develop it.*

## Next steps.

- Be sure to include this cover letter in your GitHub repository
- Your GitHub repository should be tagged #AndroidDevChallenge
- Don't forget to include other items in your GitHub repository to help us evaluate your submission; you can include prior projects you've worked on, sample code you've already built for this project, or anything else you think could be helpful in evaluating your concept and your ability to build it
- **The final step is to fill out this form to officially submit your proposal.**
